## Specification Guidelines For Recycling Baling Twine

**Quality** is the most important thing to keep in mind when recycling PP Baling Twine. In order to get the maximum recycling value from your material, it should be kept free of moisture and surface dirt.

- ▶ *Twine should be collected at bale breaking/staging area.*
- ▶ *Contamination (dirt/hay) should be removed when accumulating twine.*
- ▶ *Loose and clean twine should be consolidated near a baler or placed into a roll-off.*
- ▶ *All twine should be dry and stored indoors to ensure zero moisture.*

**Packaging** is a critical component of recycling large quantities of PP Baling Twine. Heavy shipments help minimize freight costs and consume less fuel.

- ▶ *Facilities with baler*
  - *PP Twine should be baled to ensure heavy export container shipments*
- ▶ *Facilities without baler*
  - *PP Twine should be collected and consolidated at a staging location.*
  - *PP Twine can be consolidated in Gaylord Boxes or Roll-Off Containers.*
  - *Boxes/Roll-Offs will be picked up at no charge at a staging location.*

**Price:** Based on market conditions and location/material quality.

**Size & Weight:** 40,000 lbs /40' High Cube Export Container.

*\*Call for information on different size trucks.*

**Contamination:** 5% surface dirt & moisture will be tolerated.

**Transportation:** All transportation is handled by Universal Commodity Service, Inc.
